

Cloud Computing Tutorial - 1

Demonstration of a SaaS Application: CRM on a Suitable Platform

Observation:

Payment gateway as SaaS.

A payment gateway works as SaaS by providing cloud-based payment processing that business does online without managing their own system. It offers secure transactions, automatic updates, and scalability on a subscription or per-transaction basis.
Ex: Razorpay.

5. How business use CRM to manage customer relationships and sales?

- CRM are use to store contact, sales and purchase info.
- Teams can use CRM to visually track lead, manage opportunities and move potential buyers through the sales journey.

→ Key Features of CRM:-

Contacts:- centralized database to store and manage customer details, interaction history, and communication records.

Deals:- Tracks sales opportunities from lead to closure, including value, stage and probability.

Pipelines:- Visual working flow showing stages of sales process.

Automation:- Automate repetitive tasks like follow-ups, email sending, lead assignment and reminders using predefined rules.

-9 Multi-tenancy in SaaS.

Multi-tenancy means a single CRM application instance serves multiple organizations (tenants) while keeping their data isolated.

Benefits:-

- ① Lower cost (shared information).
- ② Easy scalability.
- ③ Automatic updates for all users.
- ④ Faster deployment without separate installations.
